UNIVERSITEIT VAN AMSTERDAM

AI Pop-Up Lab Netherlands Fieldwork — Wave 1

The AI Pop-Up Lab Netherlands Fieldwork (Wave 1) was conducted in the Netherlands between 18 and 30 April 2026, approximately six months after the Dutch parliamentary elections (Tweede Kamerverkiezingen) of 29 October 2025. Data collection was administered by the AI Pop-Up Lab at the University of Amsterdam, under the supervision of Dr. Roberto Cerina (Faculty of Humanities).

The fieldwork is part of the research project *Building an Artificially Intelligent Pollster*, which develops a methodology for synthetic opinion polling combining multilevel regression and post-stratification (MrP) with large language models. The Netherlands fieldwork is the first wave of an ongoing data collection effort; parallel fieldwork is being conducted in Sweden.

Respondents completed a short onboarding survey on a tablet, followed by a recorded voice interview on one of two tracks: a Politics track focused on vote intention, issue salience, and political reasoning; or an AI Task track in which participants used the project's prototype web application. Interviews were conducted in English or Dutch, with Dutch as the default for native Dutch speakers. Full details of the interview structure are documented in the Interview Protocol.

The survey was fielded in English and Dutch. Both versions are shown for each question; the language administered to each respondent is recorded in the variable `language`. This codebook documents the survey dataset only; interview transcripts are documented separately.

The released Wave 1 survey dataset comprises 277 responses, of which 272 are complete. Responses were collected in Dutch and English. Respondents were recruited through stratified in-person intercept sampling across ten locations in the Netherlands. Participants were required to be 18 years of age or older and eligible to vote in the Tweede Kamerverkiezingen. Details of the sampling strategy are given in the Sampling section.

Fieldwork was carried out by a team of student researchers from the University of Amsterdam: Ava Ali, Shriya Agarwal, Shanella Bleekemolen, Brendan Corcoran, Danielius Jonaitis, Xuan Miao, Magdolna Müller, Alexandra Roskam, Pham Quynh Nhu Truong, Jelle Tuls, and Wenyi Xi.

Audio codes and record matching

Each participant is assigned an audio code that links their survey response to their voice-interview recording and transcript. The code follows the convention `[Initials][ParticipantID][Track][Date]`, where *Initials* identifies the presiding researcher, *ParticipantID* is a zero-padded sequence number, *Track* is either POL (Politics) or APP (AI Task), and *Date* is the interview date as DDMMYYYY. For example, `AA001POL01042026` denotes researcher AA, participant 001, Politics track, 1 April 2026; `AA001APP01042026` denotes the same participant on the AI Task track.

Survey records and transcripts are matched on this code. A small number of audio codes were mistyped in the field (for example, a dropped digit in the sequence number or a mis-keyed track label); these are corrected against a fixed lookup before matching. The procedure below loads transcript filenames and survey records, applies the manual corrections, and reports matched and unmatched counts.

```

import os, json

# --- load transcript codes from filenames ---
transcript_dir = "transcripts-pre-anon"
transcript_files = [f for f in os.listdir(transcript_dir) if f.endswith(".txt")]
transcript_codes = {f.replace(".txt", ""): f for f in transcript_files}

# --- load survey records, keyed by audio_code ---
survey_by_audio = {}
with open("t1_survey.jsonl", "r", encoding="utf-8") as f:
    for line in f:
        r = json.loads(line)
        code = r.get("audio_code")
        if code:
            survey_by_audio[code] = r

# --- first-pass match ---
matched = {c: transcript_codes[c] for c in transcript_codes
            if c in survey_by_audio}
transcript_no_survey = [c for c in transcript_codes if c not in survey_by_audio]
survey_no_transcript = [c for c in survey_by_audio if c not in transcript_codes]

print(f"Transcripts: {len(transcript_codes)}")
print(f"Survey records: {len(survey_by_audio)}")
print(f"Matched: {len(matched)}")
print(f"Transcript, no survey: {len(transcript_no_survey)}")
print(f"Survey, no transcript: {len(survey_no_transcript)}")

# --- manual correction map (field typos -> canonical code) ---
audio_code_corrections = {

      f"{len([c for c in transcript_no_survey if 'POL' in c])}")

```

Sampling

Wave 1 used stratified in-person intercept sampling at ten locations selected to span geographic and demographic variation across the Netherlands: Amsterdam, Rotterdam, Utrecht, Eindhoven, Groningen, Enschede, Lelystad, Heerlen, Emmen, and Goes. Locations were chosen on the basis of public population statistics from Statistics Netherlands (CBS) to capture variation in urbanisation, regional culture, age structure, and educational attainment that broadly mirrors the Dutch electorate.

Eligibility required participants to be 18 years of age or older and eligible to vote in the Tweede Kamerverkiezingen. The figures below summarise the demographic context of the ten sampled municipalities, drawn from CBS regional statistics: their geographic spread, educational profile, age structure, and population density.

Figure A. Wave 1 fieldwork locations. Marker size is proportional to municipal population. Source: CBS.

Figure B. Educational attainment of the population aged 15–75, by province of the sampled city. Source: CBS table 85525NED (2024).

Figure C. Age structure of the sampled municipalities. Source: CBS regional key figures.

Figure D. Population density (inhabitants per km²) of the sampled municipalities. Source: CBS regional key figures.

Administrative variables

res_audio

Unique participant identifier

Format: *[initials][sequence][track][date]*, e.g. AA001POL01042026

lang

Language in which the survey was administered

- ☐ English
☐ Dutch (Nederlands)

res_interview_lang

Language in which the interview was conducted

- ☐ English
☐ Dutch

Universe: Respondents who completed an interview

Recorded by the presiding researcher

res_city

Sampling location (city)

- | | |
|------------------------------------|-----------------------------------|
| ☐ Amsterdam | ☐ Enschede |
| ☐ Rotterdam | ☐ Lelystad |
| ☐ Utrecht | ☐ Heerlen |
| ☐ Eindhoven | ☐ Emmen |
| ☐ Groningen | ☐ Goes |

Cleaned from researcher free-text entry; off-plan locations recoded or flagged

res_attempts

Number of unsuccessful approaches before this respondent

Count (integer)

Recorded by the presiding researcher

Voting Behaviour

vote_2025

Did you vote in the parliamentary elections held on the 29th of October 2025?

[NL] Hebt u gestemd bij de Tweede Kamerverkiezingen van 2025?

- ☐ Yes / Ja
☐ No / Nee → *vote_likelihood*
☐ Not eligible to vote / Ik was niet stemgerechtigd → *vote_likelihood*
☐ Don't know / Prefer not to say / Ik weet het niet / Ik wil het niet zeggen → *vote_likelihood*

vote_2025_party

For which party did you vote in the parliamentary elections held on the 29th of October 2025?

[NL] Op welke partij hebt u bij de laatste Tweede Kamerverkiezingen gestemd?

- | | |
|--|---|
| ☐ PVV | ☐ ChristenUnie |
| ☐ GroenLinks-PvdA | ☐ SGP |
| ☐ VVD | ☐ DENK |
| ☐ NSC | ☐ Volt |
| ☐ D66 | ☐ JA21 |
| ☐ BBB | ☐ Blank / Blanco |
| ☐ CDA | ☐ Other party / Andere partij |
| ☐ SP | ☐ I don't know / Ik weet het niet |
| ☐ Forum voor Democratie | ☐ I prefer not to say / Ik wil het niet zeggen |
| ☐ Partij voor de Dieren | |

Universe: Respondents who answered 'Yes' to vote_2025

vote_likelihood

If parliamentary elections were held today, how likely is it that you would vote? (1 = very unlikely, 10 = very likely)

[NL] Als er vandaag Tweede Kamerverkiezingen zouden worden gehouden, hoe waarschijnlijk is het dat u zou gaan stemmen? (1 = zeer onwaarschijnlijk, 10 = zeer waarschijnlijk)

1	2	3	4	5	6	7	8	9	10
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐
☐	I prefer not to say / Ik wil het niet zeggen								

vote_today_party

If parliamentary elections were held today, for which party would you vote?

[NL] Als er vandaag verkiezingen voor de Tweede Kamer zouden zijn, wat zou u dan stemmen?

- | | |
|---|---|
| ☐ I would not vote / Ik zou niet stemmen | ☐ Partij voor de Dieren |
| ☐ PVV | ☐ ChristenUnie |
| ☐ GroenLinks-PvdA | ☐ SGP |
| ☐ VVD | ☐ DENK |
| ☐ NSC | ☐ Volt |
| ☐ D66 | ☐ JA21 |
| ☐ BBB | ☐ Blank / Blanco |
| ☐ CDA | ☐ Other party / Andere partij |
| ☐ SP | ☐ I don't know / Ik weet het niet |
| ☐ Forum voor Democratie | ☐ I prefer not to say / Ik wil het niet zeggen |

news_time

How much time in total do you spend reading or listening to news about current affairs on an average day? (hours and minutes; 00:00 if none)

[NL] Hoeveel tijd besteedt u op een gemiddelde dag in totaal aan het lezen of luisteren naar nieuws over actuele gebeurtenissen? (uren en minuten; 00:00 als geen)

----------------------	-------------------------

Demographics

gender

Gender self-identification

[NL] Gender zelf-identificatie

- ☐ Male / Man
 - ☐ Female / Vrouw
 - ☐ Other / Anders
 - ☐ Prefer not to say / Ik wil het niet zeggen
-

birth_year

Year of birth

[NL] Geboortejaar

Four-digit year

Used to derive age. One implausible value (1900) flagged for cleaning.

age

Age (derived from birth_year, reference year 2026)

Integer years

Derived variable: 2026 minus birth_year

municipality

In which municipality do you currently live?

[NL] In welke gemeente woont u momenteel?

Free text

Selected from a preset list of Dutch municipalities.

education

Highest level of education with diploma

[NL] Hoogste opleiding met diploma
